# Strings in c++

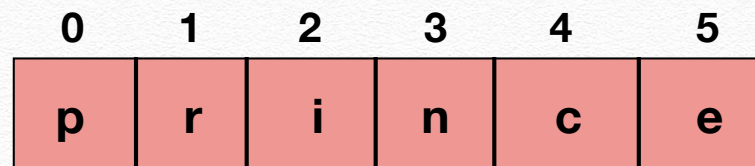

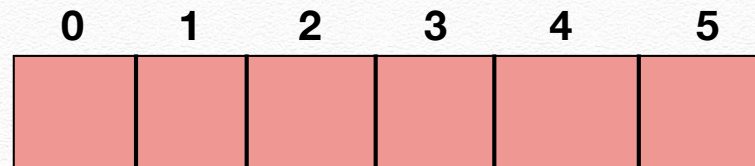

What are String ?

A set of continuous characters

For example - > "prince" , "hello"

```
String str;  
str = "prince" ;
```

**String str;**

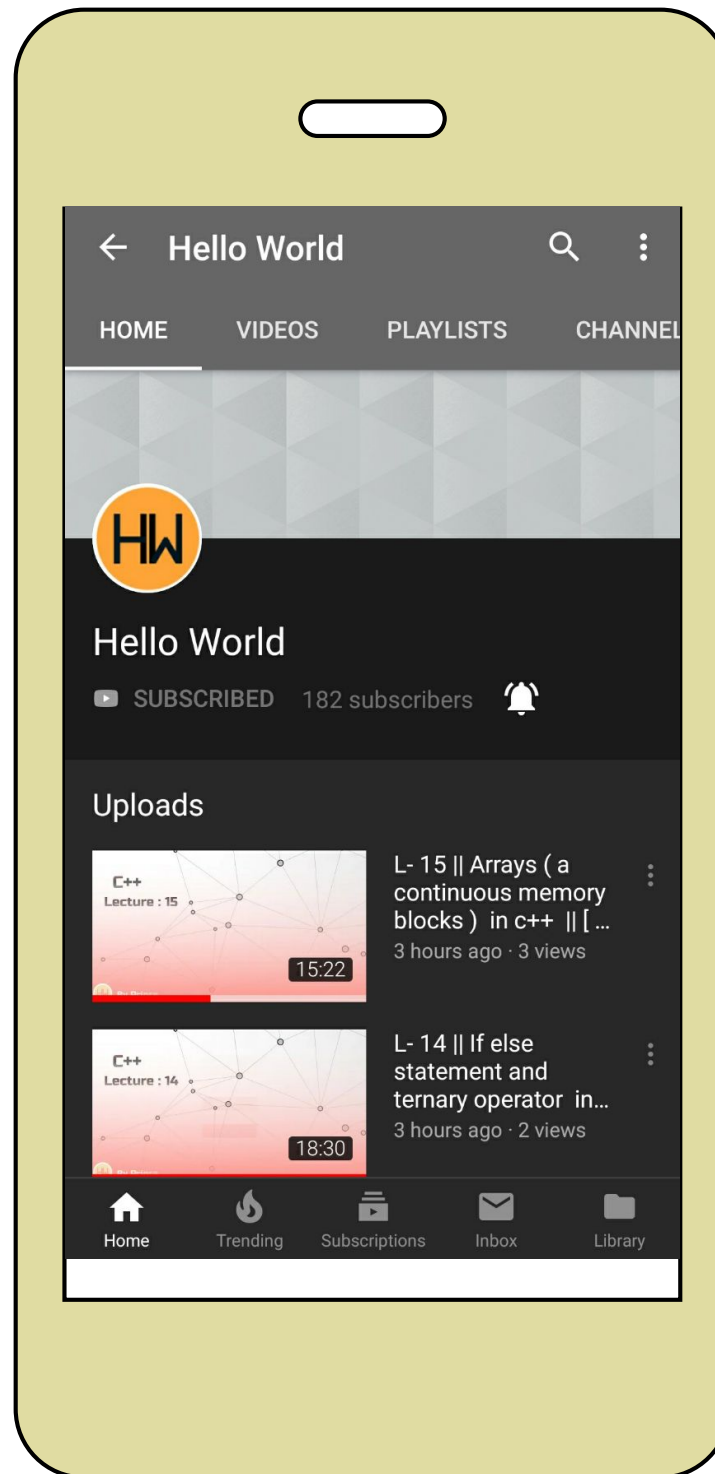

**str = "prince" ;**

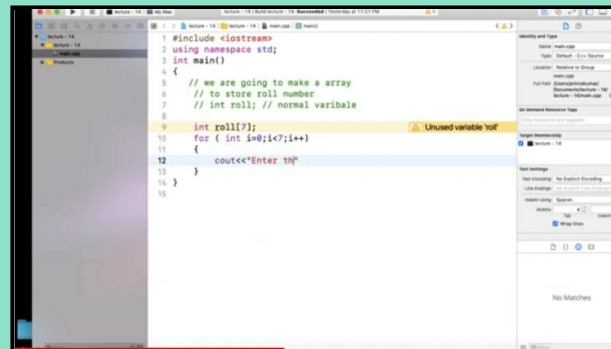

**Calculated length = 6**

| 0 | 1 | 2 | 3 | 4 | 5 |
|---|---|---|---|---|---|
| p | r | i | n | c | e |

```
1 #include <iostream>
2 using namespace std;
3 int main()
4 {
5     // we are going to make a array
6     // to store roll number
7     // int roll; // normal variable
8
9     int roll[7]; // Unused variable 'roll'
10    for ( int i=0;i<7;i++)
11    {
12        cout<<"Enter the "
13    }
14
15 }
```

In this tutorials we are going to discuss how we can store data in a continuous manner ..and here comes a concept of arrays.

Pdf of this video : [https://github.com/Prince-1501/Hello\\_...](https://github.com/Prince-1501/Hello_...)

Code in this video :

```
1 #include <iostream>
2 using namespace std;
3 int main()
4 {
5     // we are going to make a array
6     // to store roll number
7     // int roll; // normal variable
8
9     int roll[7]; // Unused variable 'roll'
10    for ( int i=0;i<7;i++)
11    {
12        cout<<"Enter the"
13    }
14
15 }
```
